Analysis Report

1.Sales Data:

1.1 Executive Summary:

- Total Revenue: **$ 2,580,851**
- Total Customers: **100**
- Average Order Value: **$120,000**
- Top Customer: CUST073 with sale of **$49,930**

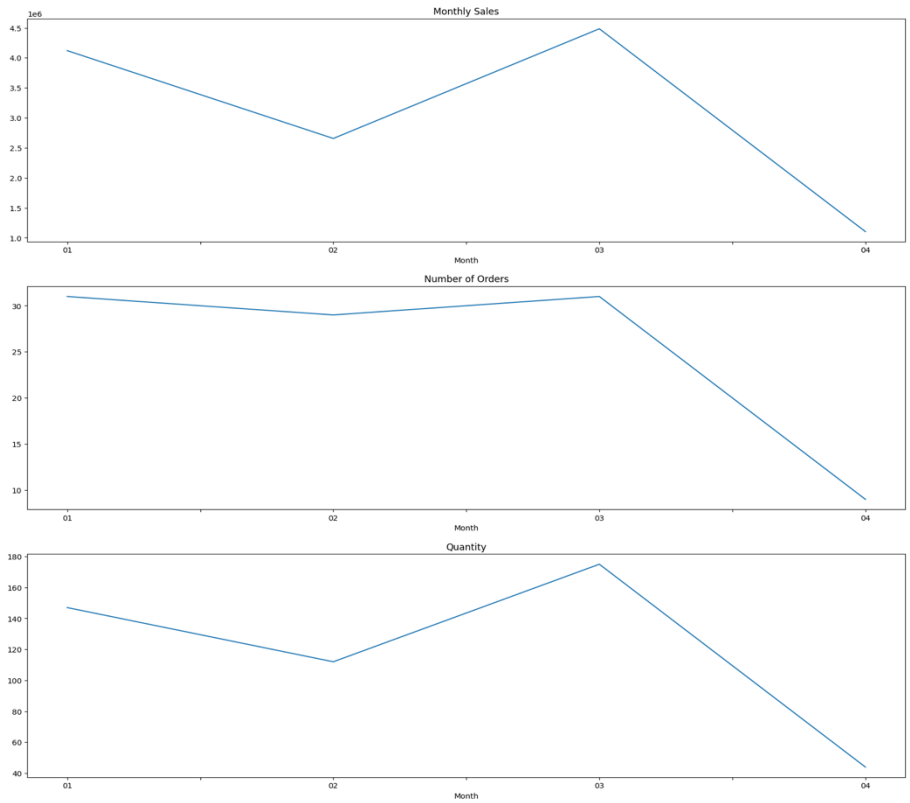
1.2 Market Analysis:

The figure displays the trends for **Sales**, **Number of Orders**, and **Quantity Sold** for different months.

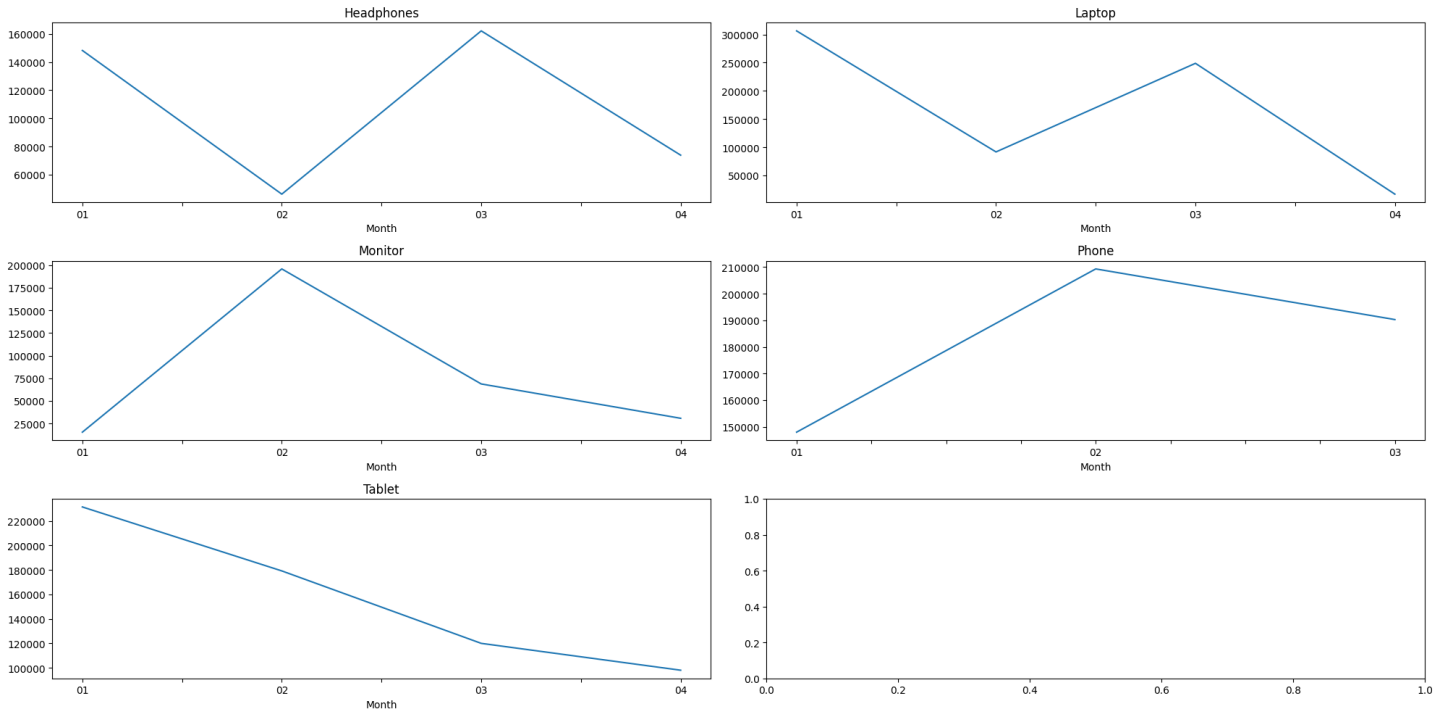
The graphs show a noticeable fluctuation in the trend for all the three items. In the initial months, they are relatively high but suffer a significant decline for the following months. However, they do recover in the middle of the period. Towards the end of the period, there is a significant decline in the items.

The trend is not consistent for the months which suggests that there might be external factors or seasonal trends.

However, the decline in the last needs to be investigated.



1.3 Product Category Analysis:



For **Headphones**, sales show a fluctuating pattern. Sales start relatively high in the first month, drop significantly in the second month, reach the highest level in the third month, and then decline again in the fourth month.

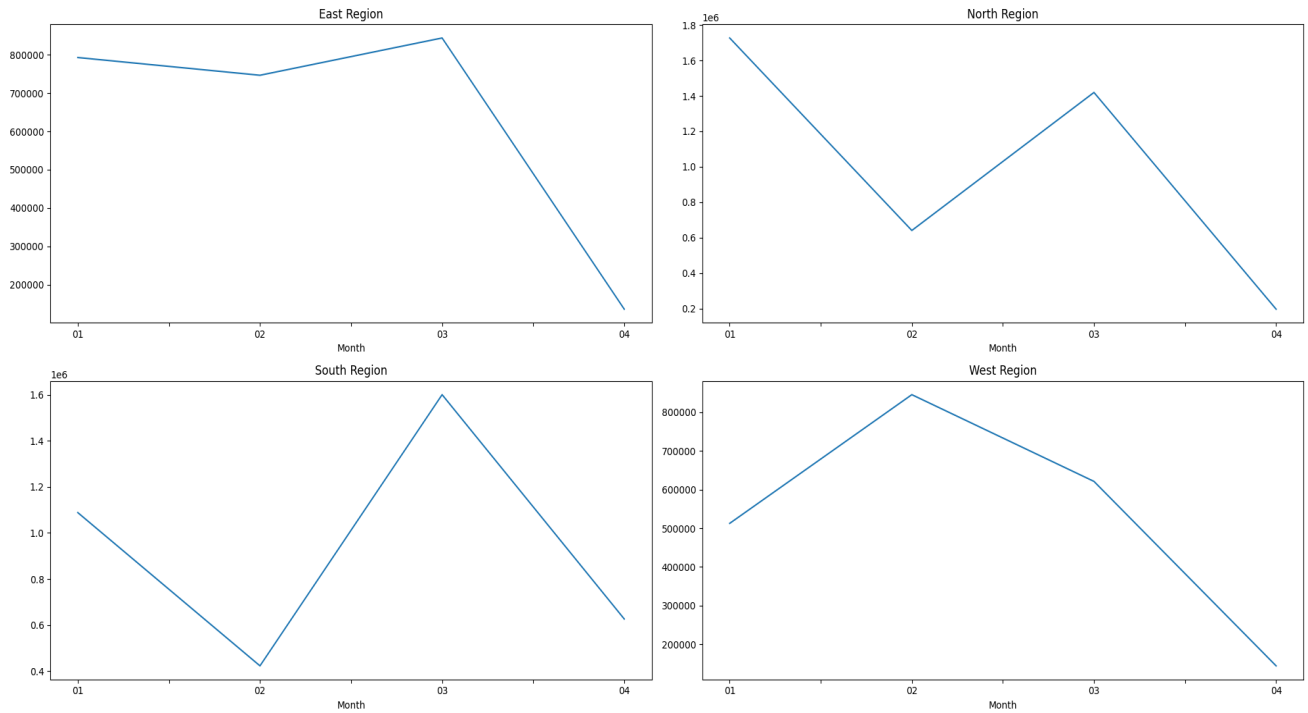
In the case of **Laptops**, sales begin at a very high level in the first month but decrease sharply in the second month. A partial recovery is observed in the third month before sales decline again in the fourth month.

Monitor sales display a different pattern. Sales increase significantly from the first month to the second month, reaching their peak, but then gradually decline in the following months.

For **Phones**, sales show a strong increase from the first to the second month, followed by a slight decrease in the third month. Despite the decline, sales remain relatively high compared to the first month.

Finally, **Tablet sales** demonstrate a consistent downward trend over the months, indicating a steady decrease in demand for this product category during the observed period.

1.4 Region Sales Analysis:

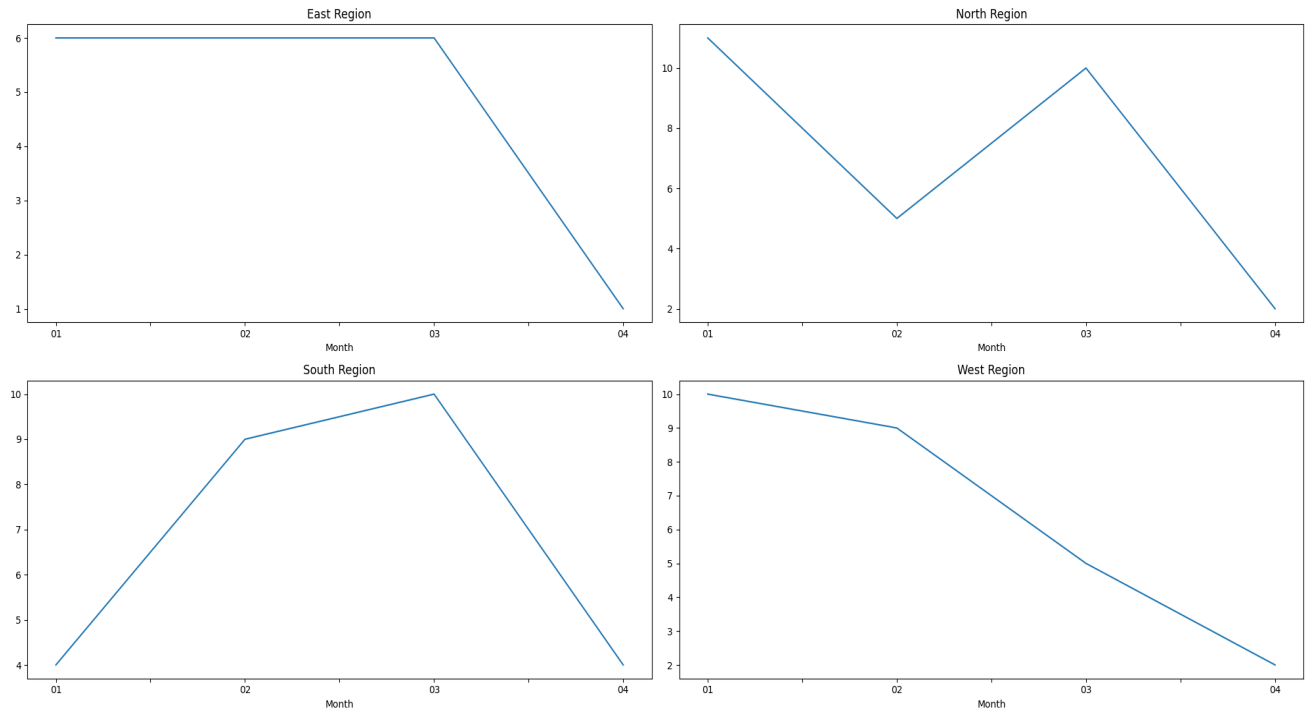


The East region maintained relatively stable sales during the first three months. Sales slightly declined from Month 01 to Month 02, followed by an increase in Month 03, reaching the highest point in this period. However, there was a **significant drop in Month 04**, indicating a sharp decline in revenue.

The North region started with the **highest sales among all regions in Month 01**. Sales dropped substantially in Month 02, then rebounded strongly in Month 03. However, similar to the East region, sales **fell sharply in Month 04**, reaching the lowest level of the observed period.

The South region showed **high variability in sales performance**. Sales dropped significantly in Month 02 but experienced a strong recovery in Month 03, reaching the **highest sales value across all regions**. In Month 04, sales decreased again but remained higher than some other regions.

The West region experienced **steady growth from Month 01 to Month 02**, achieving its peak in Month 02. After that, sales gradually declined in Month 03 and then dropped sharply in Month 04.



The number of orders followed a pattern similar to sales. Orders decreased slightly from Month 01 to Month 02, increased in Month 03, and then dropped dramatically in Month 04.

The North region had the **highest number of orders in Month 01**, which decreased in Month 02. Orders rose again in Month 03 before experiencing a sharp decline in Month 04.

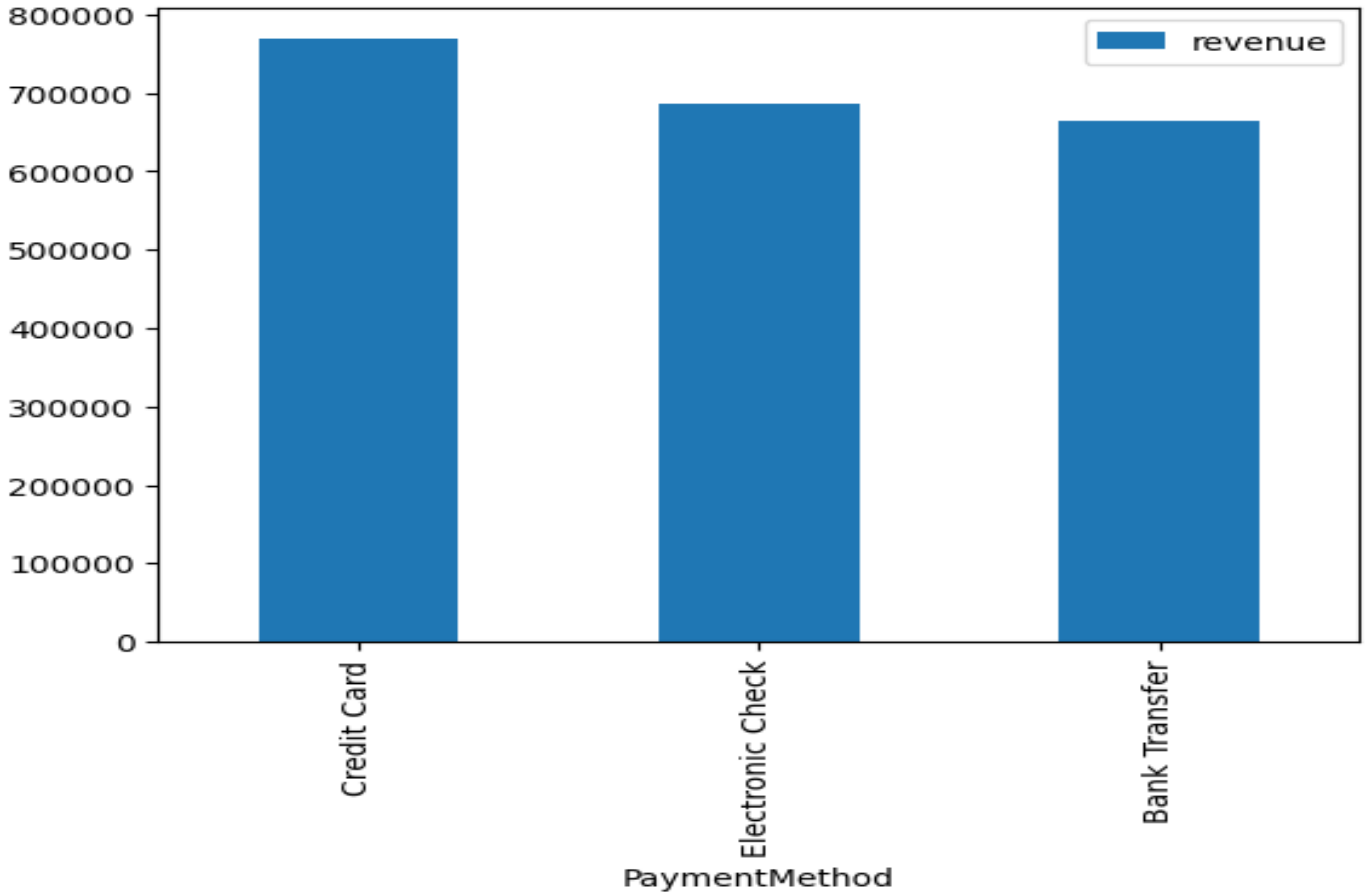
Orders in the South region gradually increased from Month 01 to Month 03, showing strong customer demand. However, there was a **significant decline in Month 04**.

The West region showed a **consistent decrease in orders from Month 01 to Month 04**, indicating a steady reduction in customer activity over time.

2. Customer Churn Data:

- **Percentage of Customers Churned for this period:** 10.6%

  The underlying reason for this cannot be conclusively identified. However, we have found out that most of the people who have stopped using our services were the ones who were on the **month-to-month contract** (approx. 66%).

  Possible solution which we can derive for now, is to **try upgrading the contract** of customers from month-to-month to either one-year contract to two-year contract.


- **Highest revenue generating Payment Method:** Credit Card
  Majority of the revenue generated was paid using Credit Card **totaling up to $769,015** which is approximately **36.29% of total revenue.**
  However, all the payment have contributed is nearly same ratio to the revenue.
